

UNIDIRECTIONAL GATE VALVE

DESCRIPTION

- Unidirectional flanged gate valve (bidirectional option to order), designed for high pressure applications, with self-cleaning seal.
- Single piece die-cast body with screwed-down bonnet and wedges to guarantee the seal.
- Provides high fl ow rates with low pressure drop.
- Various seal and packing materials available.
- Face-to-face distance in accordance with CMO Valves standard.
- It has an arrow on the body indicating the flow direction.

GENERAL APPLICATIONS

The gate valve is suitable for working with clean liquids or liquids with a concentration of solids.

Designed for a wide range of applications such as:

- Drying plants
- Paper industry
- Water Treatment
- Chemical Plants
- Food sector
- Mining
- Sludge
- Oil extraction

SIZES

ND50 to ND1200.

WORKING PRESSURE (\triangle P)

- PN 2,5 to PN 100.
- Each valve is designed according to work conditions.

STANDARD FLANGES

- ENI092 PN10.
- ASME B16.5 (class 150).

OTHER COMMON FLANGES

- PN6.
- PN16.
- PN25.
- BS "D" & "E".
- JIS10K.
- * Others on request

Fig. 1

APPLICATION OF EUROPEAN DIRECTIVES

See document of European Directives applicable to ${\bf CMO\ Valves.}$

QUALITY DOSSIER

All valves are tested hydrostatically at **CMO Valves** and material and test certificates can be provided.

- Body test = working pressure x 1.5
- Seat test = working pressure x 1.1

^{*} Others **ND** on request.

^{*} For category and zone information, contact technical-commercial department at **CMO Valves**.

ADVANTAGES

When a gate valve remains open for long periods of time and the body's internal walls are parallel a very large torque is required to close it. The inside of the **D** model body has a conical shape which provides more space; moreover, the width across fl ats in this type of valves is greater than standard, thus achieving more space. This way, when the valve is shut-o the solids stored inside it can be easily released.

This knife gate valve is defi ned as unidirectional and in this type of valves of other suppliers there is the risk of the gate bending due to the existence of counterpressure. This cannot happen with the **CMO Valves** valve because it contains internal slides that support the gate and allow it to work under counter-pressure of 30% of the maximum working pressure, without the gate becoming deformed. There is also option of making bidirectional **D valves** to order.

The stem protection hood is independent from the handwheel securing nut, this means the hood can be disassembled without the need to release the handwheel. This advantage allows regular maintenance operations to be performed, such as lubricating the stem, etc.

The valve spindle is made of stainless steel AISI304. This is another added advantage, as some manufacturers supply it with 13% chromium, resulting in quick oxidisation. The operating wheel is manufactured in nodular cast. Some manufacturers supply it in common cast-iron, which can lead to breakage in the event of very high operation torque or a bang. The yoke has a compact design with the bronze actuator nut protected in a sealed and lubricated box. This makes it possible to move the valve with a key, even without the handwheel (in other manufacturers' products this is not possible).

The pneumatic actuator's upper and lower covers are made of nodular cast iron, making them highly shock resistant. This characteristic is essential in pneumatic actuators. The pneumatic cylinder's seals are commercial products and can be purchased worldwide. This means it is not necessary to contact **CMO Valves** every time a seal is required.

STANDARD COMPONENTS LIST

| CO | MPONENT | NODULAR IRON | ST.STEEL | | | | |
|----|--------------------|--------------|----------|--|--|--|--|
| 1 | BODY | A216WCB | CF8M | | | | |

DESIGN CHARACTERISTICS

1. BODY

Single piece (monobloc) die-cast body with screwed-down bonnet. The body has interior guides for optimum sliding of the gate and wedges for improved seal-tightness. For diameters over DN1200, the body and the bonnet are mechanically welded with the reinforcements necessary to withstand the maximum working pressure. Designed with full passage to provide large flows with small losses of load.

The internal design of the body prevents solids from being stored in the seal area, whilst the distance between fl anges in this type of valves allows the solids to move freely inside the body. The standard manufacturing materials are A216WCB carbon steel and CF8M stainless steel. Other materials such as GJS500-7 and stainless steel alloys (AISI316Ti, Duplex, 254SMO, Uranus B6, etc) are available on request. As standard, carbon steel valves are painted with an anti-corrosive protection of 80 microns of EPOXY (colour RAL 5015). Other types of anti-corrosive protections are available to order.

2. GATE

The standard manufacturing materials are AISI304 stainless steel in valves with iron body and AISI316 stainless steel in valves with CF8M body. Other materials or combinations can be supplied on request. The gate is polished on both sides to provide a smooth contact surface with the resilient seat. At the same time, the gate is rounded to prevent the seat from being cut. Different degrees of polishing, antiabrasion treatments and modifications are available to adapt the valves to the customer's requirements.

RESILIENT SEAT MATERIALS

EPDM

This is the standard resilient seat fitted on **CMO valves**. It can be used in many applications, however, it is generally used for water and products diluted in water at temperatures no higher than 90°C*. It can also be used with abrasive products and it provides the valve with 100% watertight integrity.

NITRILE

It is used in fluids containing fats or oils at temperatures no higher than 90°C*. It provides the valve with 100% watertight integrity.

FKM

Suitable for corrosive applications and continuous high temperatures of up to 190°C and peaks of 210°C. It provides the valve with 100% watertight integrity.

SILICONE

Mainly used in the food industry and for pharmaceutical products with temperatures no higher than 200°C. It provides the valve with 100% watertight integrity.

PTFE

Suitable for corrosive applications and pH between 2 and 12. Does not provide the valve with 100% watertight integrity. Estimated leakage: 0.5% of the tube flow.

Note: In some applications other types of resilient materials are used, such as hypalon, butile or natural rubber. Please contact us if you require one of these materials.

3. SEAT

Four types of seats are available according to the working application:

SEAT 1

Metal / metal seat.

This type of seat does not include any kind of resilient seal and the estimated leakage (considering water as the test fluid) is 1.5% of the pipe flow.

SEAT 2

Metal / rubber seat with ring.

This type of seat includes a resilient seal which is fixed to the inside of the body by way of a stainless steel ring, which is screwed to the body in order to prevent it moving due to the high pressure.

SEAT 3 & 4:

As seats 1 and 2 but including a deflector.

The deflector is an O-ring located at the valve input with two functions: firstly to protect the valve from abrasion and secondly to guide the flow to the centre of the valve.

*Note: Three materials are available for the deflector: Steel CA-15, CF8M and Ni-hard.

4. PACKING

CMO Valves standard packing comprises several lines (from 4 to 6) of seal which provide seal-tightness between the bonnet and the spindle, preventing any type of leakage to the atmosphere. It is located in an easily accessible place and can be replaced without dismantling the valve from the pipeline. Below we indicate various types of packing available according to the use to be given to the valve:

GREASED COTTON (Recommended for hydraulic services)

This packing is composed of braided cotton fibres soaked in grease both inside and out. It is for general use in hydraulic applications in both pumps and valves.

2. DRY COTTON

This packing is composed of cotton fibres. It is for general use in hydraulic applications with solids.

3. COTTON + PTFE

This packing is composed of braided cotton fibres soaked in PTFE both inside and out. It is for general use in hydraulic applications in both pumps and valves.

4. SYNTHETIC + PTFE

This packing is composed of braided synthetic fibres soaked in PTFE both inside and out. It is for general use in hydraulic applications in both pumps and valves and in all types of fluids, especially corrosive ones, including concentrated and oxidising oils. It is also used in liquids with solid particles in suspension.

5. LUBRICATED PTFE

This is made with PTFE fi laments and designed to work at great speed. It is braided with a diagonal system. Suitable for valves and pumps which work with almost all types of fl uids, particularly with the most corrosive, such as oxidant and concentrated oils. It is also used in liquids with solid content.

6. GRAPHITE

This packing is composed of high-purity graphite fibres. A diagonal braiding system is used and it is impregnated with graphite and lubricant which helps to reduce porosity and improve operation.

It has a wide range of applications as graphite is resistant to steam, water, oils, solvents, alkali and most acids.

| | SEATS | S / SEALS | PACKING | | | | | | |
|----------------|-------------------|---------------------------------|---|------|--------|----------|------|--|--|
| MATERIAL | Tª MÁX (ºC) | APLICATIONS | MATERIA | L | P(Bar) | Tª. MÁX | рН | | |
| Steel/Steel | >250 | High temp./Low watertight integ | Greased cot | ton | 10 | 100 | 6-8 | | |
| EPDM (E) | 90* | Non-mineral acids and oils | Dry cotton | (AS) | 0.5 | 100 | 6-8 | | |
| Nitrile (N) | 90* | Hydrocarbons, oils and greases | Cotton + PT | FE | 30 | 120 | 6-8 | | |
| FKM (V) | 200 | Hydrocarbons and solvents | Synthetic + P | TFE | 100 | -200+270 | 0-14 | | |
| Silicone (S) | 200 | Food Products | Graphite | | 40 | 650 | 0-14 | | |
| PTFE (T) | 250 | Corrosion resistant | Ceramic Fib | ore | 0.3 | 1400 | 0-14 | | |
| Note: More det | ails and other ma | terials on request | * EPDM and Nitrile: it is possible up to Ta Max: 120°C on request | | | | | | |

5. HUSILLO

The **CMO Valves** spindle is made of AISI 304 stainless steel. This characteristic provides high resistance and excellent corrosion-resistant properties. The valve design can be rising stem or non-rising stem. When rising stem is required a stem hood is supplied to protect the stem from contact with dust and dirt, as well as keeping it lubricated.

6. PACKING GLAND

The packing gland fl ange, through the bushing, allows uniform pressure and force to be applied on the packing in order to guarantee seal tightness. As standard, valves with steel body include a steel packing gland fl ange, while for valves with stainless steel body this is made of stainless steel. In both cases the packing bushing is common material, usually stainless steel.

7. ACTUATORS

All types of actuators can be supplied, with the advantage that, thanks to the **CMO Valves** design, they are fully interchangeable. This design allows the customer to change the actuators themselves and no extra assembly accessories are required. A design characteristic of is that all actuators are interchangeable.

| Manual Drives |
|-------------------------------|
| Handwheel (*) |
| Chain handwheel (*) |
| Lever |
| Geared motor (*) |
| Others (square stem) |
| |
| Availability of Accessories |
| Mechanical stoppers |
| Locking devices |
| Emergency manual drives |
| Electrovalves |
| Positioners |
| Limit switches |
| Proximity detectors |
| Straight floor stand (Fig. 4) |
| Leaning floor stand (Fig. 5) |

Stem extensions have also been developed, allowing the drive to be located far away from the valve, to suit all needs. Please ask our engineers beforehand.

ACCESSORIES AND OPTIONS

Different types of accessories are available to adapt the valve to specific working conditions such as:

MIRROR POLISHED GATE

The mirror polished gate is especially recommended in the food industry and, as standard, in applications in which solids can stick to the gate. It is an alternative to ensure the solids slide off and do not stick to the gate.

PTFE LINED GATE

As with the mirror polished gate, it improves the valve's resistance to products that can stick to the gate.

STELLITED GATE

Stellite is added to the gate's lower edge to protect it from abrasion.

SCRAPER IN THE PACKING

Its function is to clean the gate during the opening movement and prevent possible damage to the packing.

AIR INJECTION IN THE PACKING GLAND

By injecting air in the packing, an air chamber is created which improves the watertight integrity.

HEATING JACKET

Recommended in applications in which the fluid can harden and solidify inside the valve's body. An external jacket keeps the body temperature constant, preventing the fluid from solidifying.

FLUSHING HOLES IN BODY

Several holes can be drilled in the body to flush air, steam or other fluids out in order to clean the valve seat before sealing.

SOLENOID VALVES

For air distribution to pneumatic actuators.

CONNECTION BOXES, WIRING AND PNEUMATIC PIPING

Fully assembled units can be supplied with all the necessary accessories.

MECHANICAL LIMIT SWITCHES, INDUCTIVE SWITCHES AND POSITIONERS

Limit switches or inductive switches are installed to indicate precise valve position, as well as positioners to indicate continuous position.

STROKE LIMITING MECHANICAL STOPS

They allow the stroke to be mechanically adjusted, limiting the valve's desired run.

MECHANICAL STROKE LIMITING STOP (MECHANICAL STOPPERS):

These allow the stroke to be mechanically adjusted, limiting the valve run.

EMERGENCY MANUAL ACTUATOR (HAND WHEEL /GEAR BOX)

Allows manual operation of the valve in the event of power or air failure.

TRIANGULAR (V-NOTCH) AND PENTAGONAL DIAPHRAGM WITH INDICATION RULE

Recommended for applications in which fl ow regulation is required. Allows fl ow control according to the valve's opening percentage.

INTERCHANGEABLE ACTUATORS

All actuators are easily interchangeable, except the lever.

DRIVE OR YOKE SUPPORT

Made of EPOXY-coated steel (or stainless steel to order), its robust design gives it great rigidity in order to withstand the most adverse operation conditions.

RECUBRIMIENTO DE EPOXI

All cast iron and carbon steel bodies and components on **CMO Valves** are EPOXY coated, giving the valves great resistance to corrosion and an excellent finish.

CMO Valves's standard colour is blue, RAL-5015.

BONNET

Provides total seal-tightness to the outside, reducing the packing maintenance required.

TYPES OF EXTENSIONS

When the valve needs to be operated from a distance, the following different types of actuators can be fitted:

1- FLOOR STAND

This extension is done by coupling a spindle to the stem. The desired extension is achieved by defining the length of the spindle. A floor stand is normally installed to support the drive.

The definition variables are as follows:

H1 = Distance from valve centre to base of the stand

d1 = Separation from the wall to the end of the connecting flange

CHARACTERISTICS:

- It can be coupled to any type of drive.
- We recommend a stem guide bracket every 1.5 m
- The standard floor stand is 800 mm high.
- Option to use a position indicator to determine the valve's percentage of opening.
- Leaning stand available to order
- Other floor stand measurements available on request.

Fig. 9

STEM GUIDE BRACKET

COMPONENT LIST

| COMPONENT | STANDARD VERSION |
|---------------|---------------------------------|
| Stem | AISI 304 |
| Rod | AISI 304 |
| Support-Guide | Carbon steel with EPOXY coating |
| Guide | AP6 |
| Stand | GJS500-7 with EPOXY coating |

Table. 3

LEANING STAND.

Fig. 10

2.- PIPE

This consists of raising the drive. The pipe will rotate in the same direction as the wheel when the valve is operated. The valve always remains at the same height.

The definition variables are as follows:

H1 = Distance from valve centre to base of the stand

d1 = Separation from the wall to the end of the connecting flange

CHARACTERISTICS:

- Standard drives: handwheel and top square.
- A pipe guide bracket is recommended every 1.5 m.
- The standard materials are: EPOXY-coated carbon steel and stainless steel.

3.- ELONGATED SUPPORT PLATES

When a short extension is required, it can be achieved by extending the support plates. An intermediate yoke can be fitted to reinforce the support plates structure.

Fig. 12

4.- UNIVERSAL CARDAN JOINT

Fig. 13

If the valve and the drive are not in correct alignment, the problem can be resolved by fitting a universal cardan joint. This option is only valid for non-rising stem drives.

HANDWHEEL WITH RISING STEM

The definition variables are as follows:

B = Max. width of the valve (without drive).

D = Max. height of the valve (without drive).

OPTIONS:

- Locking devices.
- Extensions: stand, pipe, plates,...
- DN higher than those shown in the table

ACTUATOR:

- Handwheel
- Stem
- Nut
- Stem protection bonnet

AVALAIBLE:

- DN50 to DN350.
- From DN350 the actuator is with geared motor.

| DN | Δ P (bar) | Α | В | С | D | G | F | øV |
|-----|------------------|-----|-----|-----|------|------|------|-----|
| 50 | 10 | 70 | 106 | 83 | 330 | 369 | 498 | 225 |

| 350 | 10 | 127 | 290 | 260 | 1166 | 1265 | 1695 | 450 |

^{*} Other ND on request.

CHAINWHEEL

Widely used in raised installations with di cultaccess, the handwheel is fi tted in vertical position.

The defi nition variables are as follows:

B = Max. width of the valve (without actuator)

D = Max. height of the valve (without actuator)

OPTIONS:

- · Locking devices.
- Extensions: stand, pipe, plates,...
- Non-rising stem.
- DN higher than those shown in the table

ACTUATOR:

- Handwheel
- Stem
- Nut
- Hood

AVALAIBLE:

- DN50 to DN1200
- From DN350 the actuator is with geared motor.

^{*} Other ND on request.

LEVER

This is a fast actuator.

The defi nition variables are as follows:

B = Max. width of the valve (without actuator)

D = Max. height of the valve (without actuator)

ACTUATOR INCLUDING:

- Lever.
- Stem.
- Guide bushing.
- External blockers to maintain position

AVALAIBLE:

DN50 to DN200

Fig. 16

GEAR BOX

It is recommendable for ND greater than 350.

The definition variables are as follows:

B = Max. width of the valve (without drive).

D = Max. height of the valve (without drive).

OPTIONS:

- · Chain handwheel.
- Locking devices.
- Extensions: stand, pipe, plates, etc.
- Non-rising stem.

ACTUATOR:

- Stem
- Yoke
- Cone-shaped gear box
- Handwheel
- Standard ratio = 4 to 1.

AVALAIBLE:

DN50 to DN1200.

^{*} Other ND on request.

DOUBLE-ACTING PNEUMATIC CYLINDER

The air supply pressure to the pneumatic cylinder is a minimum of 6 bar and a maximum of 10 bar, the air must be dry and lubricated.

10 bar is the maximum admissible air pressure. For air pressures below 6 bar, please check with **CMO Valves**.

For DN50 to DN200 valves, the cylinder's jacket and covers are made of aluminium, the spindle of AlSI304, the piston of rubber-coated steel and the O-ring seals are made of nitrile.

For valves larger than DN200 the covers are made of nodular cast iron or carbon steel.

To order, we can also supply the actuator made entirely of stainlesssteel, especially for installation in corrosive atmospheres.

The defi nition variables are as follows:

B = Max. width of the valve (without drive).

D = Max. height of the valve (without drive).

DISPONIBLE:

DN50 to DN900.

SINGLE-ACTING PNEUMATIC CYCLINDER

The air supply pressure to the pneumatic cylinder is a minimum of 6 bar and a maximum of 10 bar, the air must be dry and lubricated.

10 bar is the maximum admissible air pressure. For air pressures below 6 bar, please check with the manufacturer.

Available for opening or closing in the event of air supply failure (spring opens or closes)..

The casing is made of aluminium, the covers of nodular cast iron or carbon steel, the spindle of AlSI304, the piston of rubber-coated steel, the O-ring seals of nitrile and the spring is made of steel.

The actuator design is spring activated for valves with diameters up to DN200. For larger diameters the actuator contains a double-acting cylinder and an air tank which stores the volume of air necessary to perform the last movement in the event of an air supply failure.

The definition variables are as follows:

B = Max. width of the valve (without drive).

D = Max. height of the valve (without drive).

AVALAIBLE:

DN50 to DN200.

Please see the "CMO Valves Pneumatic Actuators" catalogue if you require further information.

ELECTRIC ACTUATOR

This actuator is automatic and includes the following parts:

- Electric motor
- Stem
- Yoke

OPTIONS:

- Different types and brands
- Non-rising stem
- ISO 5210 / DIN 3338 flanges

AVALAIBLE:

- ND 50 to DN 1200.
- From DN500 the motor is assisted with a gear box.

HYDRAULIC ACTUATOR

The definition variables are as follows:

B = Max. width of the valve (without drive).

D = Max. height of the valve (without drive).

THE HYDRAULIC ACTUATOR INCLUDES:

- Hydraulic cylinder
- Yoke

SUPPLY PRESSURE STANDARD:

• 150 bar.

AVALAIBLE:

- DN50 to DN1200.
- * Otros DN bajo consulta.

AVALAIBLE:

Different types and brands available according to customer's requirements.
